

Carolyn Bailey  
Rutherford Surgical Associates patient

## You don't have to live with acid reflux. Let us help.

Carolyn Bailey's acid reflux would cause burning up to her chin. "I even had heartburn from drinking water, and I had to sleep with blocks under my bed to elevate it," she says. In November, she underwent the TIF (Transoral Incisionless Fundoplication) Procedure, performed by Dr. Gregg Drabek of Rutherford Surgical Associates. Since then, the constant pain is gone and she no longer has to take medication.

"I can eat anything now. I would recommend the surgery to anyone, because you will not regret it."

The general surgeons at Rutherford Surgical Associates provide a full range of consulting, diagnostic and treatment services — including abdominal, laparoscopic, oncologic, endoscopic and endocrine surgery. Many procedures can be safely performed on an outpatient basis.
